Tulip Table Top Water Filter Manual

SAFE WATER, GOOD LIFE
Components

A upper lid
B upper bucket
C lower lid
D lower bucket
E pre-filter
F Tulip filter element
G rubber ring (filter)
H filter nut
I fast flow hose
J tap nut
K rubber ring (tap)
L tap
M scrub pad
N end of life indicator

No tools needed!
1. Remove the filter nut (H) from the Tulip filter element (F). Leave the rubber ring (G) on the filter element.

2. Attach the fast flow hose (I) to the nipple of the Tulip filter element (F) and make sure it is tightly fastened.

3. Screw the Tulip filter element (F) with the rubber ring (G) and the fast flow hose (I) into the upper bucket (B) and lower lid (C). Make sure the rubber ring (G) is between the filter element (F) and the bottom of the bucket.

Don’t push the filter element, but turn it to avoid breakages and ensure tight fastening.
Fasten the Tulip filter element (F) by using the filter nut (H).

Unscrew the tap nut. Leave the rubber ring (K) on the tap (L).

Screw the tap with rubber ring through the hole on the side of the lower bucket (D). Fasten the tap tightly by using the tap nut (J).

Place the upper bucket, with the lid of the lower bucket, Tulip filter element and fast flow hose onto the lower bucket.
Put the pre-filter (E) over the filter element and place the upper lid (A).

The first 30 liters (3 full buckets) of filtered water have to be thrown away.

Place the filter at a safe, convenient place in your house. Make sure children won’t play with the filter and handle it carefully, otherwise the filter might break.

Your Tulip Table Top water filter is now ready for use.
How does it work?

Pour dirty water into the top container. The filter takes 3-5 hours to clean one whole bucket of dirty water. Safe water is stored in the bottom container. Water is safe to drink from the tap.

Maintenance

1. To protect the filter element against clogging, the filter element is covered with a washable pre-filter (E).

2. When the pre-filter becomes dirty, remove the pre-filter from the ceramic element and wash it in clean water.
With the plastic end of life indicator (N) you can measure when your filter element has to be replaced. When the end of life indicator (N) fits around the thinnest part of the filter, the filter can no longer make the water safe to drink and must be replaced.

3. Wash the filter element regularly with a cloth or toothbrush. Do not use soap!

4. After some time, the flow rate reduces. Take the scrub pad (M) and carefully scrub the filter element to remove a very small layer of the ceramic material.

5. With the plastic end of life indicator (N) you can measure when your filter element has to be replaced. When the end of life indicator (N) fits around the thinnest part of the filter, the filter can no longer make the water safe to drink and must be replaced.
Replacing the filter element

1. Unscrew the filter nut (H).
2. Unscrew the ceramic candle carefully.
3. Take out the ceramic candle element. Pull the fast flow hose (I) off the filter element.
4. Take a new filter element out of the box. Remove the filter nut (H) from the Tulip filter element (F). Leave the rubber ring on the filter element.
Screw the Tulip filter element with the rubber ring and the fast flow hose into the upper bucket (B) and lower lid (C). Make sure the rubber ring is between the filter element and the bottom of the bucket.

Attach the fast flow hose (I) to the nipple of the Tulip filter element (F) and make sure it is tightly fastened.

Fasten the Tulip filter element (F) by using the filter nut (H).

Place the upper bucket, with the lid of the lower bucket, Tulip filter element and fast flow hose onto the lower bucket.
Put the pre-filter (E) over the filter element and place the upper lid (A).

The first 30 liters (3 full buckets) of filtered water have to be thrown away.

Your Tulip table top water filter is now ready for use again.
